Dear One Call PC Solutions Customers:

We would like to thank you all for your referrals, you are really helping One Call grow. In this newsletter we are sending you some important information on Wireless Internet Access and Spam Inspectors. If you have any question or concerns please don't hesitate to call. Thanks.

## Stop Spam!!!

Spam defense is quickly becoming an essential component of your online security and privacy protection. With email communication quickly becoming filled with more spam than legitimate communication, you cannot afford not to protect your mailbox with SPAM INSPECTOR. The cost of Spam Inspector is a one time fee of \$19.95 and can be downloaded at [www.giantcompany.com](http://www.giantcompany.com)

## Wireless Internet Access...

On a recent survey we have found that most residential wireless networks are not secure. Meaning anyone that gets close enough to the wireless router can get access to your computer. If we have set up your wireless routers you have no need to worry, but if you have any friends who setup there own they might want to have it checked just to be on the safe side.

## Virus & Security Alerts

W32.Sobig.E@mm and Trojan.Systrim are both virus' that you need to be on the look out for. W32.Sobig.E@mm is a mass-mailing worm that can send itself to your entire address book. The Trojan.Systrim is a Trojan Horse that is capable of stealing user names and passwords. The existence of the file systrimit.exe is an indication of a possible infection.

Shield Up is the Internet's quickest, most popular, reliable and trusted, free Internet security checkup and information service. Easily check your system and begin learning about using the Internet safely. It can be found [here](#).

## Mini-ITX Special Project PC

Clint has just finished an exciting new project using a 6 3/4" square motherboard. He built a computer into an 1988 Console CD player; he was able to make the power button on the CD player turn the computer on and the CD drive now holds his DVD player and the open/close button still works to control it. To see pictures of this project and a more detailed story: <http://www.1callpcsolutions.com/cdpc/>

## Office Closed

Thursday July 17th through July 20th the office will be closed. We will reopen Monday July 21st. We will have access to our messages, so please feel free to call in and we will return your calls as soon as possible.
