It's time again for our newsletter! In this issue: Virus alerts, Website information, regular maintenance and Filehippo.com ...

Virus and Spam Alerts...

Trojan.Stranget.B is a Trojan horse that logs keystrokes, steals passwords and system information, and sends it to a remote attacker. It also downloads files and opens an FTP server by exploiting the Microsoft Internet Explorer CreateTextRange Remote Code Execution Vulnerability. The second virus is W32.Gammy a virus that searches network shares and infects executable files. The following are two new pieces of ad/spyware to be on the lookout for. First, Spyware.ESP is a spyware program that monitors user activity on the compromised computer. It also takes screenshots of the desktop. Next, Adware.Crawler is a program that redirects searches made in Internet Explorer's address bar. It can also redirect 404 Error pages to a site on the crawler.com domain.

Internet Locking Up...

If you have DSL or High Speed Cable Internet service and a router and you are having trouble getting on the Internet try unplugging the power to your router and modem for about 5 seconds and then plug them back in. We have had a problem with our routers locking up and not allowing access to the Internet. By unplugging the router and modem you reset them and release anything that is locked up. If this doesn't fix your problem, give us a call and we will be happy to come out and have a look.

Need a Website...

Do you need a website? Personal or Professional we can help you out. Web sites can be designed in any way you can imagine from business contact information to sharing your family photos. The most important advantage to registering your own domain and having your own website is an email address that never changes. Please contact us for more information regarding this service, it's more affordable than you might think. Many setups are completely done for under \$450 including the first year of hosting costs. You can view a few of our sites at www.1callpcsolutions.com/sites.htm

Filehippo.com...

If you are looking for a website where you can download antivirus programs, anti-spyware, and other goodies. Look no further than www.filehippo.com. They have almost anything you are looking for. It is a safe place to download from, they don't have pop-ups on their site and you are not at risk for getting a virus from them. So have a look at their site and know that you are safe there.

Regular Maintenance...

Did someone say backup? Even our residential clients need to keep a regular backup. It can be anything from writing your important files and pictures to a CD to a External Hard drive that automatically backs up your data nightly. Data retrieval can get pretty pricey and you would not want to lose all of your family photos or all of your recipes just because you don't have a backup. If you need any help setting up a backup system please feel free to give us a call or send an email.

Final Bit...

Thanks to everyone for all of your patience last week while Clint was out sick. We really appreciate you all.
